About Us

Paraverse is a pioneering international leader in digital parallel world technology. We are redefining the composition and operation of the parallel world by providing a globally leading decentralized real-time cloud rendering platform, along with a Web3.0 transaction platform designed for XR applications and 3D digital assets, to serve enterprises and developers worldwide. By integrating cutting-edge technologies such as real-time cloud rendering, cloud-native architecture, and blockchain, we enable users to swiftly access the metaverse, establish essential services for Web3.0-based digital asset transactions, lower the barriers to entry for end-users to venture into the metaverse, and drive a thriving ecosystem for creators.

Paraverse leads in digital parallel world

We provide decentralized cloud rendering and Web3 transaction platform for XR and 3D assets

ParaLab ⊕ ⊖ ⊗

3D Digital Parallel World Operating System

A global leading decentralized real-time cloud rendering platform for enterprises and developers，built on LarkXR

Out-of-the-box In 30 minutes for a quick deployment
Full-link Product matrix Refine
Support by the API / SDK for secondary development
Multi-engine, pan-terminal Non-invasive integration of various engines support all kinds of heterogeneous terminal access

Convergence type Integrate new AI interaction methods，Access to IOT data interaction
**100% Safe** Users' data are isolated individually, ensure the security of data assets
Stabilize Stable running of 50 million+ mins in multi-network environment

3D Digital Parallel World Asset Utilization and Circulation System

A Web3.0 transaction platform built on Lark Chain, specifically designed for XR applications and 3D digital assets.

Solving 3D ownership and asset transfer issues
By utilizing NFT technology, three-dimensional models can be uniquely identified with ownership records, ensuring the authenticity and traceability of assets.
Empowering 3D creators with long-term sustainable income
Through NFTs, creators can establish revenue-sharing mechanisms for their works.
Addressing 3D copyright infringement issues
